

# The Arduous Beginnings of EC Reform

by Rudolf Hrbek, Tübingen\*

**The first step towards reform of the EC was taken when the Single European Act came into force in July of this year. What concrete decisions must the member states now take? What are their chances of being implemented?**

---

The Single European Act<sup>1</sup> amending and supplementing the treaties establishing the European Communities brings a seven-year reform debate to an end for the time being.<sup>2</sup> The reforms demanded and proposed were often far-reaching and ambitious, such as the calls for the powers of the EC to be extended to other important policy fields and for the efficiency and democracy of the Community decision-making system to be substantially improved. The outcome is modest by comparison, a view endorsed almost unanimously by European policymakers,<sup>3</sup> academic observers and commentators alike.<sup>4</sup>

□ The field of operations of the Community is widened to include "research and technological development" and "environment", although decisions in these domains will require unanimity.

□ The treaty provisions regarding "social policy" are supplemented by declarations of intent on "improvements, especially in the working environment" and on furthering the "dialogue between management and labour".

□ Decisions by a qualified majority (54 of the 76 votes of the twelve member states) are to make it easier to complete the internal market, which will be achieved by the end of 1992. However, unanimity will continue to be required for provisions affecting taxation, vocational training and the conditions of access to certain professions. In addition, safeguard clauses allow individual member countries to break with the joint approach, provided they are not doing so for economic reasons, in other words using the right as a means of arbitrary discrimination or disguised protectionism.

□ Under the title "economic and social cohesion", the Single Act aims to amend the structure and operational

rules of existing Funds and other financial instruments to aid the weaker member countries; decisions in this regard must be unanimous.

□ Member countries shall co-operate in economic and monetary policy in order to achieve the objective of convergence; institutional changes, in other words the further development of the EMS, will require unanimity.

□ Provisions on "European co-operation in the sphere of foreign policy" place European Political Co-operation (EPC) on a treaty basis, but only codify existing practice.

□ Only minor modifications are made in the decision-making system; the Single Act does not meet the repeated demands for the European Parliament to be strengthened nor does it curb the scope for veto votes on essential matters in the Council.

## A Difficult Start

Even though the Single European Act is a modest piece of reform legislation, its provisions could not enter into force until July 1987:

□ The minority government in Denmark felt obliged to hold a consultative referendum, since several of the

<sup>1</sup> The text of the Single European Act, which was signed in February 1986 and finally came into effect in July 1987 after completion of the ratification procedure in all twelve member countries, is reproduced in: Bulletin of the European Communities, Supplement 2/86.

<sup>2</sup> A brief summary is contained in Rudolf Hrbek: Die "Europäische Union" als unerfüllbare integrationspolitische Daueraufgabe? Lehren aus dem Reform-Septennium der EG (1980-1987), in: Ernst-Joachim Mestmäcker, Hans Möller, Hans-Peter Schwarz (eds.): Eine Ordnungspolitik für Europa. Festschrift für Hans von der Groeben, Baden-Baden 1987, pp. 167-200, especially pp. 170-185. The initial phase of the reform debate is described in detail in the collection of essays by Bruno Bengel et. al.: Nur verpaßte Chancen? Die Reformberichte der Europäischen Gemeinschaft, Bonn 1983. Information on the more recent phase of the debate since 1984 is contained (with source texts) in the collection of essays by Werner Weidenfeld, Wolfgang Wessels (eds.): Wege zur Europäischen Union. Vom Vertrag zur Verfassung?, Bonn 1986.

\* University of Tübingen.

Act's provisions went too far for a majority in Parliament. On 27th February 1986 the Single European Act was approved by 56.2% of voters (with 74.8% of the electorate participating in the referendum), but the debate again confirmed the underlying doubts among a majority of Danes about far-reaching progress towards integration.<sup>5</sup>

□ In Germany the ratification procedure was not completed until nearly the end of 1986. As a condition of their consent, the Länder had demanded that the ratification law include provisions according them greater rights to participate in the domestic decision-making process on EC matters permanently affecting their interests. Moreover, in the course of the consultations between the Federal and Länder governments, the Länder voiced sometimes serious reservations about some of the new provisions.<sup>6</sup>

□ The Act's entry into force was further delayed by the fact that the Irish Government could not deposit the instrument of ratification immediately, despite approval by the Dail, since a citizen had sought an injunction on the grounds that the Single European Act was unconstitutional. Although the case was rejected in the lower court on 12th February 1987, the Irish Supreme Court decided in favour of the plaintiff on 9th April 1987; the provisions on foreign policy co-operation were indeed incompatible with the Irish constitution. The Government and the Dail therefore had to hold a referendum to amend the constitution on 26th May 1987; with a participation of only 44%, 69.9% of votes were cast in favour and 30.1% against. The amendment

<sup>3</sup> Representative in this respect are speeches and statements made at the signing of the Single European Act in Luxembourg on 17th February 1986 and in The Hague on 28th February 1986, especially the speech by the Vice-President of the European Parliament, Siegbert Alber, and by the Italian Foreign Minister, Giulio Andreotti. The speeches and statements are reproduced in a brochure published by the Council of the EC.

took effect three weeks later, so that the Single European Act could come into force on 1st July 1987.<sup>7</sup>

The Act merely opened up avenues for progress towards integration. If the opportunity were to be seized, the declarations of intent, objectives and avowals would have to be followed by concrete measures. As before, further advance depended largely on the member countries and their governments. Only if they were determined to exploit the new provisions and only if they could reach a consensus that paid due heed to their differing interests could the Act be a success.

The protracted and difficult reform discussion that had gone on since 1980 did not give grounds for optimism in this regard. The membership had been widened still further with the admission of Portugal and Spain, two countries with specific problems and correspondingly high expectations; the search for consensus would probably be even more difficult than before. Moreover, there was a danger that existing problems – above all the reforms that had been initiated after the Fontainebleau summit in the summer of 1984 but not yet completed, and the rapidly growing budget deficit –

would so occupy the attention of governments that there would be no room for medium-term initiatives and far-reaching reform.

### Commission Proposals

That was the situation prevailing when the EC Commission tabled proposals on the further development of the Community in February 1987.<sup>8</sup> The proposals, known as the "Delors package", set out the conditions that the Commission considers necessary for the success of the Single European Act. Far-reaching reform is proposed in three areas: the Common Agricultural Policy, the structural funds and the system of finance.

□ *Reform of agricultural policy.* As already outlined in its Green Paper of 1985,<sup>9</sup> the Commission is aiming to achieve better balance on agricultural markets, in other words a reduction in surpluses and a cut in the budget resources spent on disposing of them from 60% at present to 50% at most. This ambitious aim entails the following measures: "A restrictive price policy, more flexibility in guarantees and intervention mechanisms, a greater degree of producer co-responsibility, including recourse to quota systems". In view of the marked differences in the agricultural structure of the twelve member countries, the Commission considers it essential to create a supplementary mechanism at Community level for supporting incomes; any schemes operated by national governments in this area would have to be brought within the Community framework. Finally, proposals to amend the agri-monetary system have been announced, involving the controversial monetary compensatory amounts. By stating that the proposed range of instruments would have to be complemented by "regional measures", in other words measures to be taken in conjunction with the reform of the structural funds, the Commission is underlining the fact that its proposals form a comprehensive whole, a "package" in EC parlance.

□ *Reform of the structural funds.* The Commission document lists five objectives for Community structural policies: the promotion of backward regions, support for

distressed industrial regions, measures to combat long-term unemployment, action to ease the integration of young people into employment and the promotion of rural development in connection with the reform of the Common Agricultural Policy. The Commission suggests doubling the resources of the three structural funds<sup>10</sup> in real terms by 1992, to around 25% of the budget total. The first objective of "enabling the less-developed regions to catch up" is given clear priority, and accordingly up to 80% of the resources of the European Regional Development Fund may be set aside for those regions. By placing the accent here, the Commission wishes to take account of the disparity between the North and the South in the Community, which became even more pronounced with the accession of Portugal and Spain. In order to improve the effectiveness of the three funds, emphasis is to be laid on financing programmes rather than individual projects. In addition, efforts are to be made to improve the co-ordination between the actions of the individual funds, which will also be integrated into programmes.

□ *Reform of the system of finance.* In the introduction to its proposals, the Commission points out that the resources available under the present system of finance are inadequate, that even the intended raising of the ceiling on the Community's share of VAT from 1.4 to 1.6% will not prevent budget deficits and that by approving the Single European Act member states had agreed that the Community should assume additional tasks entailing additional expenditure. The Commission therefore suggests that a further source of revenue be tapped to augment the Community's own resources, which come at present from customs duties, agricultural levies and a proportion of VAT receipts. "The basis of this supplementary resource would be provided by the difference between the GNP of each country and the basis of assessment of VAT". The Commission claims that using the GNP of member countries as the basis would be fairer, since it would refer to member states' actual ability to pay, as reflected in investment, public expenditure and net exports. The Community's share of VAT could then be reduced to 1%. Until 1992 the ceiling on available resources should be set at 1.4% of the Community's GNP. The United Kingdom should continue to receive relief, but its rebate should be

reduced to 50%; all member countries should contribute to financing it, although Germany should bear only up to 25% of its normal share. The reform of the system of finance would be supplemented by measures to instil greater budgetary discipline and by new budget management rules.

### Redistribution of Resources

The linkage between the various elements of the reform is obvious. Without reform of the Common Agricultural Policy the Community's financial latitude would soon be back to zero, even if its own resources were substantially increased, quite apart from the fact that no agreement on a larger volume of finance can be expected unless farm policies are reformed.<sup>11</sup> Without an appreciable increase in the resources of the structural funds the economically weaker member countries will not agree to further development of the internal market, since this will primarily benefit the efficient industrial countries in the North of the Community but impose a considerable additional burden on themselves. Finally, unless the budget is greatly increased the Community will not be able to finance new policies, especially in the fields of research and technology and the environment.

The Commission's reform proposals ultimately entail a redistribution of resources, and thus impinge upon vested interests. The member countries that are expected to make sacrifices in this area will only accept to do so if they see the prospect of compensation elsewhere. The Delors package therefore emerges as a highly ambitious and far-reaching reform plan, though it is highly uncertain whether it can be achieved quickly. The outcome of the meeting of the European Council in Brussels at the end of June 1987 demonstrates that this sceptical appraisal is not unjustified. On the basis of the Commission proposals, the decisions required to implement the Community development programme embodied in the Single European Act should have been taken at that meeting, but in fact they were postponed – in the accustomed EC manner, one might say; the next European Council, to be held in Copenhagen at the beginning of December 1987 under the presidency of Denmark, should now decide.<sup>12</sup>

Governments' initial reactions to the Delors package already suggested that rapid decisions were not to be expected. The difficulties in the various fields that have prevented a unanimous decision being reached became all too obvious during the consultations in preparation for the Brussels summit. The sensitive issues will be discussed below; besides the three main

components of the Delors package, these also include measures to complete the internal market, the 1987-91 framework programme in the field of Community research policy and topical problems such as budgetary gaps and the farm price review for 1987/88.

### Current Budget Shortfalls

Without doubt, the Commission's proposals for reforming the system of finance are of central importance to the further development of the Community. Their acceptance would greatly expand the volume of finance – by around 50% – and would save the Community having to haggle over essential increases in resources at ever shorter intervals, as it has had to do in the past. The present budgetary problems demonstrate the urgent need to reorganise the system of finance.

□ The Community's first concern is to cover the budget gap for 1987, which was initially estimated to be at least ECU 5 billion but by mid-year was expected to exceed ECU 6 billion. Its causes lie in a deficit of ECU 0.8 billion carried over from 1986, a reduction of ECU 1.5 billion in customs receipts and, as yet not exactly quantifiable, additional expenditure on agricultural policy; the last two items are due largely to the depreciation of the dollar. Discussions on a supplementary budget to cover the deficit dragged on for months and were extremely difficult. The solution governments finally devised in July 1987 is unsatisfactory and, being yet another stop-gap measure, it merely provides a further argument for fundamental reform. The ministers agreed to deploy the remaining own resources, in other words to draw on the Community's full 1.4% share of VAT. The lion's share of the deficit will be covered by paying farm subsidies in arrears in the 1988 financial year rather than in advance. In the meanwhile, member states must provide interim financing, which in the present state of affairs can be financed only via short-term borrowing. Since countries with high interest rates will be particularly hard hit, Greece, Portugal, Ireland and Spain have been promised an interest rate subsidy of just under 7% from Community resources on their borrowing requirement. The rest of the deficit will be met by postponing the repayment of advances due to member countries and temporarily transferring to the Community the 10% of its "traditional" own resources normally refunded to member states to cover collection costs. Such

---

<sup>11</sup> This is a cast-iron demand continuously made by Mrs. Thatcher, the British Prime Minister.

<sup>12</sup> The conclusions of the Belgian Presidency on the meeting of the European Council in Brussels are reproduced in: Agence Europe, No. 4581 of 2nd July 1987, pp. 5-9.

measures merely postpone the solution of the problems and are rightly described as “gimmicks”<sup>13</sup> or even “artistic juggling”.<sup>14</sup>

□ Secondly there is the question of the budget for 1988. The Commission’s estimate provides for an increase of 5% to a total of around ECU 40 billion. This exceeds the VAT ceiling of 1.6% expected for 1988. The estimate prepared by the finance ministers of member countries is lower, around ECU 36 billion, but it is criticised as unrealistic and ultimately deceitful, since agricultural expenditure estimates are far too low.

### Future System of Finance

The reorganisation of the system of finance will be difficult to achieve, urgent though it be. The use of GNP as an additional yardstick for future budget contributions would fundamentally alter the system and the wealthier states, in particular, would have to contribute a larger share. However, it does stand a chance of being adopted, because it is these countries that have an interest in the swift completion of the internal market. The less developed countries in the South of the Community will oppose rapid progress in this direction unless there is an expansion in financial resources, which would be used partly to replenish the structural funds that are intended primarily to benefit the weaker members. At the Brussels summit the German Chancellor Helmut Kohl indicated that his country was prepared to go along with the Commission’s proposals.

Even if the principle of using GNP as a new additional criterion for determining the Community’s own revenue is accepted in principle, serious hurdles still have to be crossed on the details. One of the main questions is whether a rebate should continue to be granted to the United Kingdom, something the British Government has demanded but the other member states have initially rejected. Further haggling on this issue in the time-honoured fashion is undoubtedly in store. Then there is the question when the new system will come into effect and whether it should replace the old system in a single step or be phased in gradually. The Commission’s budget estimate for 1988 assumes – as if it were a matter of course – that additional revenue will already be available from 1st January 1988 onwards. In view of countries’ differing interests, it could be deemed a great success if the new system were applied in 1989. Finally, there is the hurdle of ratification of the new system in all member countries, since the provisions governing

Community finances are based on treaties. The United Kingdom has not given any indication so far that it will agree. The British Prime Minister wishes to use the present financial plight of the Community to exert pressure for a radical reform of the Common Agricultural Policy; it is an opportunity she does not wish to let slip, at least not prematurely.

### Reform of Agricultural Policy

The Commission based its proposals for the 1987 farm price round on the positions it had adopted in the Delors package and continued its earlier efforts gradually to restore market equilibrium. The proposals announced in February 1987 were the subject of months of difficult and highly charged deliberations; it was not until the first half of July 1987 that the Council of Agriculture Ministers was able to reach final decisions on the “price package” for the 1987/88 financial year, after the Heads of State and Government had settled particularly difficult issues at the Brussels meeting of the European Council. The “price package” contained the following elements:

□ The Commission continued to follow a restrictive policy as regards target and intervention prices, freezing the prices of some products and reducing them on others. It was mainly Germany, represented by Agriculture Minister Ignaz Kiechle, that vehemently opposed what it considered were unacceptably large price cuts. The CDU and CSU parties in the Bonn coalition felt obliged to pay heed to their farming constituents and voters in rural areas. Analysis of the results of elections to the Federal and Land assemblies had warned them of discontent and criticism in rural areas, where many voters had abstained. The farm prices that were finally agreed therefore produced smaller savings than the Commission had forecast – almost ECU 1 billion less for 1987 and around ECU 3.6 billion less for 1988. The decisions on prices were closely linked with supporting measures on the organisation of markets. Here the Commission had called for a reduction in compulsory intervention, the introduction of thresholds on guaranteed volumes and a tightening of quality requirements. Combining these with structural measures providing support in particular for farmers who opt for extensive or environmentally oriented farming for a fairly long period, it was possible to make some further progress in containing the milk market.

□ Germany also offered particularly strong opposition to the Commission’s demand for a reduction in monetary compensatory amounts, since such a measure would entail price reductions for German producers. A solution to the issue was made possible at

---

<sup>13</sup> Stuttgarter Zeitung, 2nd July 1987.

<sup>14</sup> Neue Zürcher Zeitung, 16th May 1987.

the summit by a bilateral Franco-German understanding. It provides for a gradual reduction in MCAs but allows German farmers to receive compensation from national resources; the other member states accept the latter, i.e. do not reject it as an unjustified subsidy, which would distort competition.

□ The Commission introduced a new element into the overall package in the shape of a proposal for a tax on oils and fats. On the grounds of wishing to stabilise consumer prices, duty was to be levied on vegetable fats and oils if average prices in a particular year fell below the 1981-85 average price of soya oil. This levy, a kind of consumer tax, would have generated at least ECU 2 billion in 1988, which the Commission wanted to put towards the ever rising cost of financing the fats market organisation, estimated at ECU 4 billion in 1988. The plans met with vehement opposition, particularly from the United Kingdom, Germany and the Netherlands, which pointed to the adverse effects it would have in the field of trade policy. Moreover, member states had little inclination to take measures deemed to be prejudicial to consumers. The plan was rejected at the meeting of the European Council.<sup>15</sup>

It is becoming clear that the Community's agricultural policy can be reformed only in small steps that are consequently of limited effectiveness. If taking land out of production<sup>16</sup> is described as ultimately the only effective means of limiting output (and not co-responsibility levies, production quotas or price reductions), the question arises whether the requisite economic, social and political conditions are present in

member countries, in other words whether such a policy would be feasible. It is highly indicative that agricultural policy will continue to be unfinished business on the Community's agenda.

### Reform of the Structural Funds

The admission of Portugal and Spain further accentuated the disparities in prosperity within the Community. Their accession gave the Commission a further reason for demanding a real doubling of the structural funds by 1992. Whereas countries in the South of the Community regard such an increase as a minimum demand, the Commission's proposals go too far for most of the states in the North. This became clear immediately after publication of the Delors package. Despite obvious opposition, the Commission stood by its fundamental demand, as the overall plan presented at the end of July 1987 shows. This framework programme sets out concrete proposals in line with the ideas on a more efficient and concentrated use of the structural funds' resources first outlined in the Delors package. Regions where the per capita GNP is more than 25 % below the Community average would count as "underdeveloped" and would receive up to 80 % of the resources of the European Regional Development

<sup>15</sup> Some observers surmise that the EC Commission was well aware of the opposition to the tax on oils and fats in several member countries and included it in the price package partly as a bargaining counter that could be negotiated away in exchange for other concessions.

<sup>16</sup> This point of view was expressed recently by Sicco L. Mansholt: Beschränkung der landwirtschaftlichen Produktion. Ein Problem der EG-Politik, in: Europa Archiv, No. 15/1987, pp. 429-436.

Fund. The Commission attaches great importance to measures under multiannual development programmes, on which the Community institutions would have to collaborate with national governments and regional and local authorities.

Measures in this field, which are designed to promote what the Single European Act terms economic and social cohesion, are inseparable from the objective of completing the internal market. This explains the willingness of the German Government to support the Commission's approach, although not fully or in all details. It also means that the United Kingdom will probably not maintain its staunch opposition to a swift expansion in Community finances indefinitely, since London stands to gain from the internal market. The internal linkage between the various elements in the reform package is evident here too.

### **Completion of the Internal Market**

Many observers see the aim of completing the internal market by 1992, and the introduction of simplified majority decision procedures in order to achieve that aim, as the central element in the Single European Act. Willy de Clercq, a member of the EC Commission, noted in a speech in mid 1987 that a great deal had been achieved in this area in a relatively short space of time, although until then the Council of Ministers had approved only 57 of the 180 proposals made by the Commission and the entire programme for the removal of trade barriers encompassed around 300 measures.<sup>17</sup> The Commission's programme for 1987, which the President of the Commission Jacques Delors presented to the European Parliament on 18th February 1987,<sup>18</sup> lists a series of individual measures regarding the internal market, grouped under the following headings: the removal of physical, technical and tax barriers, the liberalisation of public procurement, measures to guarantee the free movement of workers and members of the professions, creation of an environment favourable to industrial co-operation and free capital movements and liberalisation of the services market.<sup>19</sup> Tax harmonisation and the liberalisation of public procurement are considered to be particularly important but problematic fields.

The Commission announced its tax harmonisation proposals in mid-July 1987. It does not propose the complete harmonisation of value added tax but the introduction of two tax rates, each with a 5% margin of variation. The standard rate would be between 14 and 19%, the reduced rate (for food, energy for heating and lighting, passenger transport, pharmaceutical products, books newspapers and magazines) between 4 and 9%.

Implementation of these proposals will encounter opposition in many countries, since in the United Kingdom and Ireland, for example, certain everyday requisites are zero-rated and countries such as Denmark and Ireland would have to reduce their standard rate, currently 22 and 25% respectively. In addition, the Commission proposes uniform rates for the various excise duties on spirits, wine, beer, tobacco, petrol, diesel oil and heating oil. Here too, the impact of implementation would differ from one country to another and in some cases would appreciably restrict the government's financial freedom of action. Difficulties would also have to be expected if harmonisation entailed raising tax rates. The Single European Act stipulates that decisions in this regard must be unanimous, given their far-reaching consequences.

It is conspicuous that neither the Delors package nor the Commission's programme for 1987 speaks uniformly of the "completion of the internal market", but instead uses phrases such as "the establishment of a large market without internal frontiers" or "completion of an area without internal frontiers" and states that "a common economic area" must be established. This embraces not only measures to dismantle trade barriers but much more far-reaching action. In his speech, Willy de Clercq explicitly mentioned in this connection the strengthening of economic and social cohesion, for which specific political decisions would have to be taken, such as an increase in the resources of the structural funds, the harmonisation of national economic policies and measures to strengthen and further develop the EMS.<sup>20</sup> It can hardly be expected that an "internal market" defined in this way, or more correctly a "common economic area", can be achieved by the end of 1992.

### **Research and Technology Policy**

Research and technology policy has been within the Community's field of activity for several years. The framework programme for research and development for the period 1985-87 was approved in 1983, even before the Single European Act formally declared "research and technological development" to be a responsibility of the Community. Once that had been done, it was only logical that the Commission should submit a second framework programme in 1986, this time for the period from 1987 to 1991. The proposal

<sup>17</sup> The speech was delivered at the International Monetary Conference in Hamburg; see the report in *Neue Zürcher Zeitung* of 23rd June 1987.

<sup>18</sup> The Commission's programme for 1987 is reproduced in: *Bulletin of the European Communities*, Supplement 1/87, pp. 36 ff.

<sup>19</sup> *Ibid.*, pp. 43-44.

<sup>20</sup> See the report in *Neue Zürcher Zeitung* of 23rd June 1987.

spoke of financial resources of ECU 10.3 billion. Germany, the United Kingdom and France rejected this estimate as far too high. In the summer of 1986 the Commission therefore scaled the requirement down to ECU 7.7 billion, but this also failed to gain the necessary support, so that the original intention of deciding on the framework programme before the end of the year could not be achieved. Conflicts of interest proved to be too wide; whereas the smaller member countries approve of a well endowed programme since they expect it to redistribute resources in their favour, the large countries are less dependent on Community funding for ambitious and expensive programmes. Moreover, they do not rely solely on the Community as a framework for implementing measures in the fields of research and technology.<sup>21</sup>

The deliberations continued into 1987. In March the Belgian Presidency of the Council won the approval of ten member states for a compromise proposal providing for funds totalling ECU 6.8 billion; the United Kingdom remained implacably opposed, but Germany indicated it might sanction the proposal. Not until mid-July was agreement reached on the new framework programme, which involves finance of ECU 5.6 billion. The United Kingdom agreed to a compromise whereby ECU 5.2 billion would be approved initially and the remaining ECU 0.4 billion would be released once agreement had been reached on the future system of Community financing. The entire episode is a prime example of the way in which decisions are reached in what has now become a Community of Twelve; it is particularly typical of areas to which member states attach high priority, for one reason or another.

### Assessment of Results

Bearing in mind the problems portrayed above, it would have been unreasonable to expect that the European Council meeting in Brussels at the end of June 1987 would reach final decisions on the entire Delors package and hence on the measures necessary for the successful implementation of the programme contained in the Single European Act. Instead, decisions were postponed to the next summit, to be held at the beginning of December 1987 in Copenhagen under the Presidency of Denmark. Opinions differ

<sup>21</sup> On this entire subject, see the overview in Rudolf Hrbek, Vera Erdmann: Integrationschub durch Technologiepolitik? Zur Reichweite neuer Aktivitäten in der EG, in: ORDO-Jahrbuch 1987.

<sup>22</sup> The wide range of assessments was evident in the debate in the European Parliament on 7th July 1987 on the outcome of the summit, a debate in which the Belgian Prime Minister, Wilfried Martens, President of the Council for the first half of 1987, and Jacques Delors, President of the Commission, participated. See the summary report in Das Parlament, No. 30-31 of 25th July/1st August 1987, pp. 13-14.

widely on the outcome of the Brussels meeting; some observers speak of setbacks and failure, but others are less critical.<sup>22</sup> How should the results of the summit be judged and what do they signify for the further development of the Community?

The conclusions of the Belgian Presidency reaffirm objectives and state ways and means of achieving them, as already listed in the Delors package:

- The establishment of a common economic area with the various elements this entails, namely conditions identical to those prevailing in a national market, economic and monetary policy convergence, strengthening of the EMS and greater economic and social cohesion in accordance with the provisions of the Single European Act. The specialist councils of ministers are called upon to make use of the decision-making procedures made possible by the Single Act – i.e. qualified-majority voting – in order to advance towards completion of the internal market.
- The urgent need for a new framework programme for Community research and technology policy is forcefully underlined.
- Reform of the structural funds is recognised to play the central role in achieving greater cohesion. As in the Delors package, the statement advocates a greater concentration and more efficient usage of resources in the context of comprehensive programmes. The priority accorded to less developed regions is also confirmed. Whereas the Commission had demanded a doubling of resources, the final declaration merely states that a financial objective must be set.
- The link between the creation of new resources and the maintenance of strict budgetary discipline is reinforced. In this context, it is expressly stated that in no circumstance can the increase in agricultural expenditure be permitted to exceed the increase in the Community's own resources.
- As regards new own resources, the Council is requested to set a new ceiling based on a percentage of Community GNP. The relative prosperity of member countries is explicitly recognised as a criterion.
- In the field of agricultural policy, the conclusions urge measures to restore market equilibrium but mention supplementary measures in the form of direct income support within a uniform Community framework.

Commission President Delors was undoubtedly right when he claimed before the European Parliament that the Commission's proposals had, in the main, been upheld at the summit. It can therefore certainly not be

said that the summit was a failure. The question is only whether it is realistic to expect final decisions to be reached at the summit in Copenhagen.

### Difficulty in Reaching Decisions

The dilatory way in which many of the central problems of the Community were dealt with in the first half of 1987, so that only a few urgent problems had come closer to solution by the end of July 1987 (the supplementary budget for 1987, agricultural prices for the 1987/88 farm year, the framework programme for research and technology), was undoubtedly due partly to the fact that national elections were being held in several member countries. At such times the governments concerned are so absorbed by domestic policy issues that the Community institutions – and more especially the Council – are necessarily hampered in their ability to reach decisions. This is a recurring problem with which the Community will have to come to terms now that it has twelve member countries, which means that national elections will occur relatively often. Since important decisions require unanimous approval, it is unlikely that Community decision-making can be speeded up.

The Brussels summit demonstrated what that implies in concrete terms. The final declaration was approved by only eleven delegations, with Mrs. Thatcher declining to add her signature on the grounds that the statements were too vague and would in any case not guarantee any cuts in agricultural expenditure. By adopting this attitude, the British Government isolated itself at the Brussels summit. It seems to view its veto against the Delors package as a means of forcing far-reaching reform of the Community's agricultural policy. Although it is an open question how forcefully London will press its point of view in the further deliberations, the British can ultimately be expected to fall into line, since London itself has a strong interest in some parts of the reform package.

The Brussels summit can therefore be described as a first step in the implementation of the Delors package. If one remembers the extremely long period of discussion that was needed before the Single European Act was finalised, the length of the deliberations over the Delors

package are not at all abnormal for the Community. Since it is a question of redistributing resources, it is correspondingly difficult to put together packages of measures, which is the only way in which decisions can be reached. Another question entirely is whether the electorate, which will be called upon to vote in the third direct elections to the European Parliament in the spring of 1989, understands and accepts this way of decision-making and hence also the extremely slow pace of decision-making in the EC.

### High Degree of Interdependence

Despite all the difficulties in overcoming current problems and reaching decisions on the medium-term development of the Community, on the international scene the EC presents itself as a reality that other countries and groupings take for granted. This should be borne in mind when describing the present state of the Community. One manifestation of this, for example, is the debate in Austria and other residual EFTA countries "on forging even closer relations with the European Communities".<sup>23</sup> They are considering not just an extension of the free trade agreements but also association or even entry, subject to special safeguards in the case of Austria or other neutral states. Another indication is that the Council for Mutual Economic Aid (CMEA) has recently shown renewed interest in intensifying and formalising its relations with the EC.<sup>24</sup> Finally, the EC (through European Political Co-operation, which was placed on a firm treaty basis in the Single European Act) is being attributed a central role in the current consideration of ways to reorganise and tighten security co-operation in Western Europe.<sup>25</sup>

There are therefore no grounds for speaking of a profound crisis in the EC. What needs to be realised, is how difficult it is to reach forward-looking decisions in a community of states that have different structures and interests but which nevertheless look to one another and are tied together in the international arena in a way that had not existed before. The high degree of interdependence and the need for consensus will also shape the future development of the Community.<sup>26</sup> Spectacular strides should therefore not be expected, but one can expect a further step-by-step intensification of relations. Hence it would be unwise to have too high hopes of the next summit in Copenhagen.
